

Marvin Mitchell

Jakarta, Indonesia | +628111922215 | marvin.mitchell.zwakenberg@gmail.com

Software Engineer with more than 12 years of experience building scalable and robust mobile, web, and backend systems. Excels in system design, technical leadership and product management.

EXPERIENCE

Amarbank, Indonesia — *Technical Architect*

Dec 2023 - PRESENT

Responsibilities

- Define system architecture, technical frameworks, scalability, and security standards for the engineering teams.
- Ensure alignment of architectural solutions with business objectives.
- Collaborate with business leaders, product managers, and stakeholders to translate requirements into technical specifications.

Key Achievements

- Introduced A/B testing, increasing feature release accuracy by 70% by incorporating user engagement.
- Designed workflows of automated testing using Codecept.js, reducing regression issues by 40%.
- Led and developed an anonymizer engine ensuring 100% compliance with PCI-DSS and GDPR standards.
- Led process of refactoring of React state management library from redux to Zustand, using strangler method. Achieved 100% after 3 months.

Amarbank, Indonesia — *Interim Engineering Manager*

Dec 2023 – May 2024

(Dual role while serving as Technical Architect during recruitment process)

Responsibilities

- Oversaw daily operations of multiple engineering squads to ensure timely delivery and technical alignment.
- Facilitated sprint planning, performance reviews, and mentorship sessions.
- Managed team structure, hiring coordination, and cross-functional collaboration during leadership transition.
- Represented engineering in leadership meetings and contributed to org-wide strategic decisions.

Key Achievements

- Improved delivery velocity and team morale during interim period.
- Ensured zero disruption in project delivery during leadership gap.
- Successfully onboarded new Engineering Manager and facilitated smooth handover.

Amarbank, Indonesia — Staff Backend Engineer

Jan 2022 - Nov 2023

Responsibilities

- Design and enforce architectural standards for backend development.
- Build and maintain scalable microservices architecture.
- Collaborate with product managers, frontend engineers, and DevOps teams to deliver end-to-end solutions.

Key Achievements

- Successfully led migration from a distributed monolith to microservices, reducing deployment time by 50%.
- Eliminated performance bottlenecks during traffic spikes by transitioning to an asynchronous, event-driven model. Reducing downtime by 60%.
- Designed and implemented a Centralized Repository for storing repetitive static data, reducing duplicate storage across multiple services by 70% using CQRS

Amarbank, Indonesia — Senior Backend Engineer

Apr 2019 - Jan 2022

Responsibilities

- Develop high-performance services APIs using Golang.
- Take ownership of backend components, ensuring reliability and scalability.
- Mentor junior and mid-level engineers, promoting best practices and professional growth.

Key Achievements

- Fixed a major database query bug in a vital backend service, improving uptime from 87% to 99%.
- Successfully mentored 7 engineers, resulting in career advancements and promotions.

DattaBot, Indonesia — Senior Backend Engineer

Aug 2018 - Apr 2019

Responsibilities

- Build and maintain serverless APIs using Node.js and AWS Lambda.
- Develop Solidity smart contracts running on Ethereum.
- Design and manage CRM system for Hara Token, a blockchain-based data exchange for the agricultural sector.

Key Achievements

- Led migration from DynamoDB to PostgreSQL, improving query performance by 70%.
- Designed and deployed optimized Solidity smart contracts, by enabling batch transactions. Reducing minting costs by 25% and gas fees by 30%.

Telkom, Indonesia —Senior Software Engineer

May 2016 - Jul 2018

Responsibilities

- Build and maintain secure payment backend services, for QR-code-based mobile payment systems.
- Collaborate with product managers to translate business needs into technical solutions.

Key Achievements

- Successfully migrated a PHP legacy service to Java J2EE, increasing performance by 50%..
- Integrated mobile payments with Rintis, using ISO8583 communication standards. Fully achieved in 2 months.

SKILLS

Fullstack & Backend Development

- Django, Laravel, Next.js, Nuxt.js, Ruby on Rails
- Flask, Go-micro, Lumen, Node.js, NestJS, Spring Boot

Web Development

- Vue.js, React.js, WordPress

Database Design & Management

- CouchDB, DynamoDB, Elasticsearch, MySQL/MariaDB, MongoDB, Neo4j, PostgreSQL, Redis

System & Architecture Design

- Scalable system design, cloud architecture, microservices, security best practices

Programming Languages

- Golang, Java, JavaScript/TypeScript, Kotlin, PHP, Python, Ruby

FREELANCE & CONTRACT PROJECTS EXAMPLE

- **Qazwa.** An online Sharia financing platform developed using Lumen (PHP framework) and Nuxt.js
- **Tektaya.** Payment Point Online Bank (PPOB) Android app for bill payments.
- **Permatahati.** Profile Website created using Wordpress for a Resort & Organic Farm.
- **BNI PFM.** Financial Management backend service created using Django Rest Framework.

EDUCATION

Gunadarma University, *Master*

2015 - 2017

Management Information Systems

Gunadarma University, *Bachelor*

2011 - 2015

Bachelor of Technology
